

1. Instalação Linux

Foi instalado nativamente o Debian em minha máquina secundária:

2. Comandos Linux

Comandos no shell foram testados e documentados no arquivo de texto *commands.txt*

3. Linux File System

- /bin - essential user command binaries
- /boot - static files of the boot loader, known as *grub* files
- /dev - device files/drivers
- /etc - system configuration files(same as Control Panel in Windows)
- /home - home directories for users
- /initrd - information for boot
- /lib - library files(dependencies)
- /lost+found - files saved during failures
- /misc - miscellaneous purposes

/mnt - mount point for external file systems(CD-ROM, digital camera, pen drive), if WSL being used it is where Windows files are

/net - remote file systems

/proc - virtual file system about system resources

/root - administrative user's home directory

/sbin - binaries used by the system and the sysadmin

/tmp - temporary files

/user - program, libraries, docs related to user programs

/var - variable and temporary files created by the user
